

Miniplane Features & Benefits

Lightest Paramotor Available

- the Miniplane is the lightest Paramotor available on the market today. It is also one of the least expensive and most reliable, according to more than one independent surveys.

Aerodynamic Fuel Tank

- the Miniplane features an exceptionally well designed fuel tank, keeping the airflow undisturbed behind the pilot, unlike many Paramotors that have a block style gas tank under or below the seat.

Easy Pull-Start

- Starting the Top 80 motor is as easy as a snap, with the over the shoulder pull start.

Clutched propeller

- Miniplane also has one of the most significant safety features available on any Paramotor, a clutch! This means that you can start the motor without the propeller spinning. The clutch engages the propeller when you are ready for power, and stops spinning shortly after coming off power, whether on the ground or flying.

Light & Efficient Cage

- The design of the Miniplane paramotor's cage is a true work of art, as the side sticks, upper sticks and fiberglass cage rings are all super strong, yet lightweight. The netting is tightened to create a very strong and obvious barrier to keep your hands away from the propeller.

Remote Choke

Even after a long motor-off session, the Miniplane can be remotely choked when the Motor is cold.

Efficiency in Motion

- Couple this remarkable Paramotor with an efficient and lightweight Paraglider and you have a flying machine that is unsurpassed in portability, accessibility, and ease of use, not to mention the pure pleasure of the experience it offers.
